

ELMS DRY FEED BLOCK

Elders Livestock Management Solutions (ELMS) takes advantage of proven, easy to use techniques that help animals use feed, pasture, fodder crops, grains and supplements more effectively and efficiently. The ELMS DRY FEED BLOCK has been designed specifically to deliver the highest levels of feed efficiency, health and productivity Australian farmers need to drive their profitability. As dry seasons these days are getting longer, the ELMS DRY FEED BLOCK will assist you in looking after your valuable stock and their nutritional needs over the summer season as they graze dry pasture and stubbles.

Farmers are in the business of producing as much high quality beef, lamb and wool from every kilogram of feed their animals eat. That means having stock going forward even under the toughest of feed conditions! To achieve this, the ELMS DRY FEED BLOCK has been built using advanced ELMS carbohydrate, protein, vitamin and mineral technologies to deliver much more than any other standard block in the market. Putting that technology into block form makes it easy to feed out. Above all ELMS DRY FEED BLOCKS are very cost effective way of getting your stock to achieve high levels of productivity even during the toughest times.

Features

- » Built using proven ELMS carbohydrate, protein, vitamin and mineral technologies
- » Contains 8% urea, 30% bypass protein meal
- » Designed to stimulate the rumen to allow animals to deliver higher levels of feed efficiency
